# Illustrations

# What we are talking about

## 1.1 Illustration example

## 1.2 Evaluation criteria

- constraints: make a list and evaluate all solutions?
- flexibility: no constraint on the source code
- granularity: method, AST, other?
- integration: is it integrated into the system?
- self preservation: case of proxies?

## 1.3 Performance overhead evaluation

- source code with instrumentation example
- describe the used method
- describe the limitations of the method

# Bibliography
